

Jetpack Joyride

Welcome to My Indy Project Jetpack Joyride!!!

Game Description: Jetpack Joyride is a side-scrolling endless running action game. Collect power ups and avoid obstacles to make your character run further.

UI/Panel Labels:

- High score, is able to be saved using file io, to a .txt file called jetpackjoyride.txt
- Shields: shows the total shield count including the active one
- Quit button to close the app
- Restart game creates a new game
- Score: shows the score of the current game
- Transformations: shows the number of vehicle transformations stored in the queue
- Next: shows the order of transformations left in the queue, if more than three will use ellipsis to indicate there are more than displayed

Powerups:

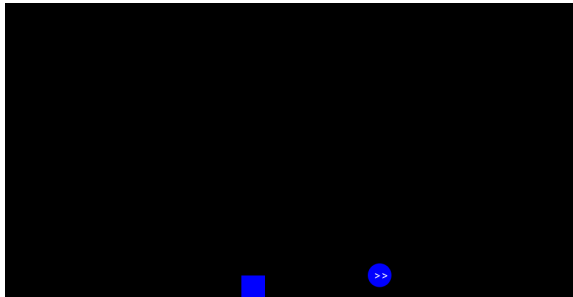

Power Ups provide unique special abilities to the avatar to help your character travel farther.

Zoom PowerUp:

PowerUp Icon: blue circle with ">>" text

Visual Effect: blue triangle behind the active vehicle indicating speed boost

Mechanics: speeds the game up by 5* current speed, current vehicle is immune to obstacle collision during this duration

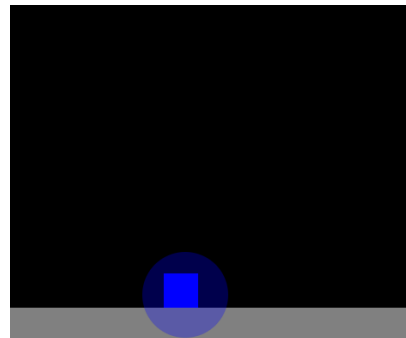

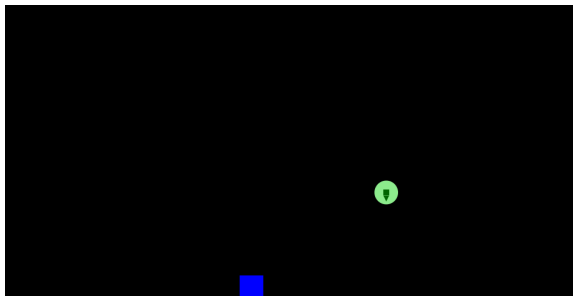

Shield PowerUp:

PowerUp Icon: green icon with gray shield crest

Visual Effect: adds a semi-transparent circle around the vehicle indicating it is protected

Mechanics: provides a protective barrier for the current vehicle, when collision with obstacle is detected, shield is removed. Shields are stackable, and the total is tracked in the shields label.

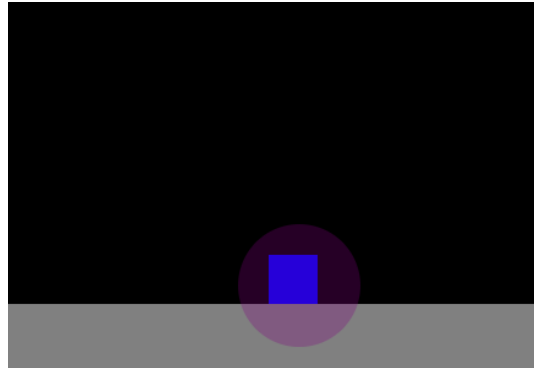

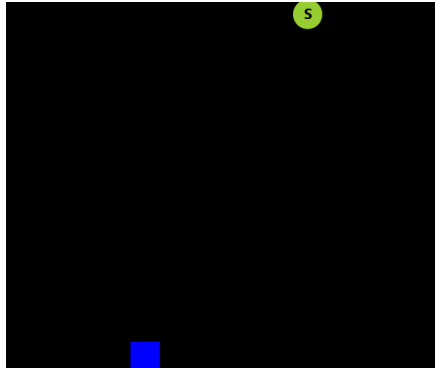

Slow-motion PowerUP:

PowerUp Icon: yellow-green icon with “S” text

Visual Effect: adds a semi-transparent circle around the vehicle indicating it is traveling slower

Mechanics: slows the game to $\frac{1}{2}$ of the current speed, making it easier to dodge obstacles. The current vehicle is still susceptible to collision.

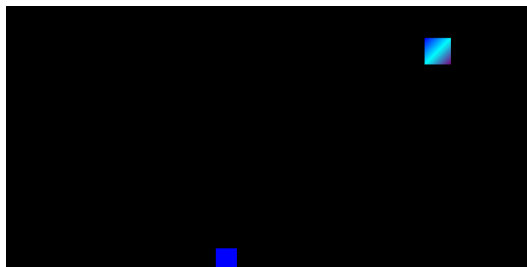

Vehicle PowerUp:

PowerUp Icon: blue-purple iridescent square

Visual Effect: none

Mechanics: Transforms the current vehicle into one of 4 special vehicles, as described below

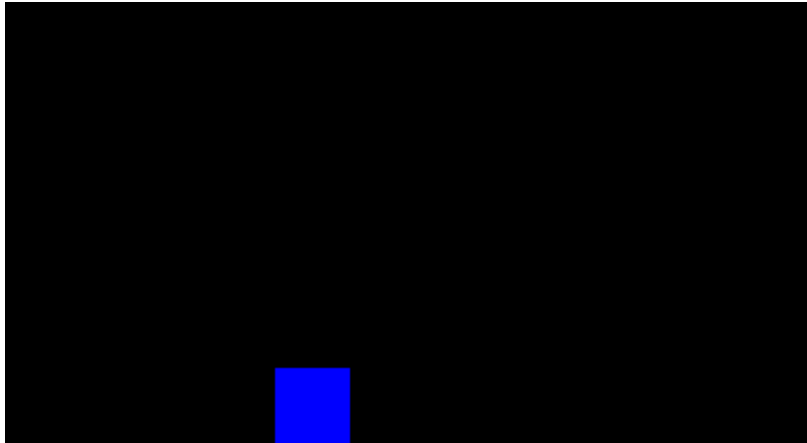

Vehicles:

Avatar (default):

Visual: blue square

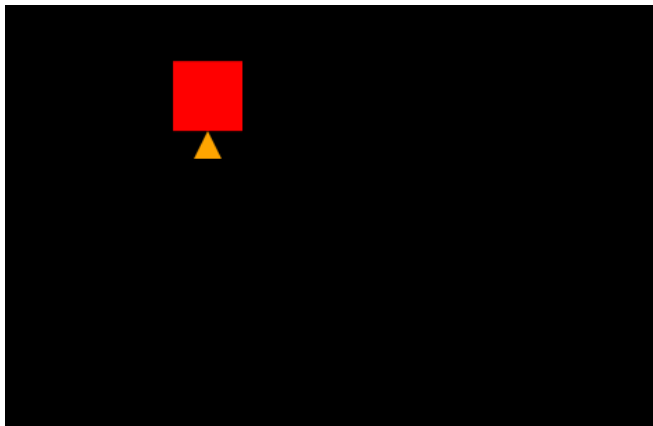

Movement mechanics: pressing space provides upwards thrust acceleration, gravity pulls it down top the bottom of the screen

Stomper:

Visual: red square, adds orange triangle underneath indicating that thrust is active

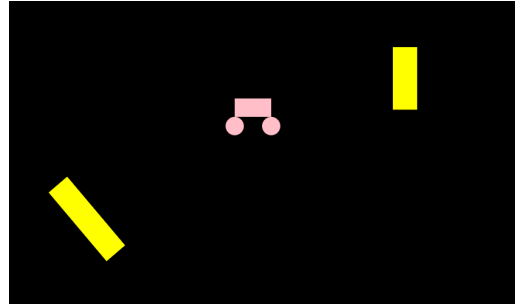

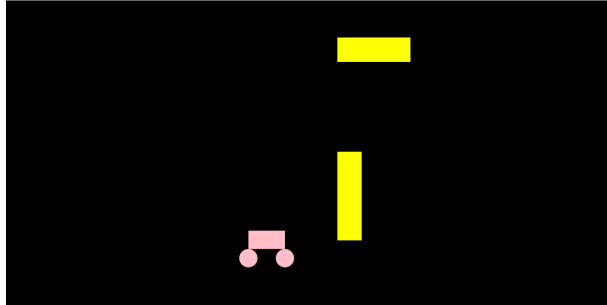

Movement mechanics: pressing space allows the stomper to jump, pressing/holding space while in midair will provide slight thrust to slow down descent, increased gravity effect

Motorcycle:

Visual: pink rectangle with two circular wheels

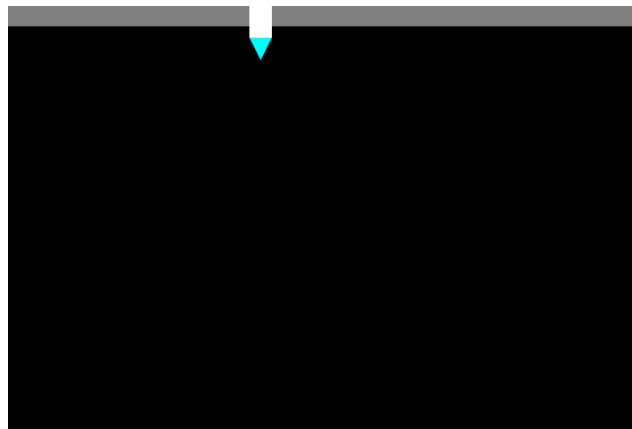

Movement mechanics: short press space to jump $\frac{1}{3}$ of the screen height, long press space and release to jump $\frac{2}{3}$ of the screen height

GravitySuit:

Visual: white square with blue triangular hat, turns upside down when gravity reversed

Movement mechanics: pressing space will reverse gravity's effects between pulling the character towards the ceiling or floor, is switchable in midair, reduced gravity effect

Dragon:

Visual: string of green rectangles, undulates sinusoidally

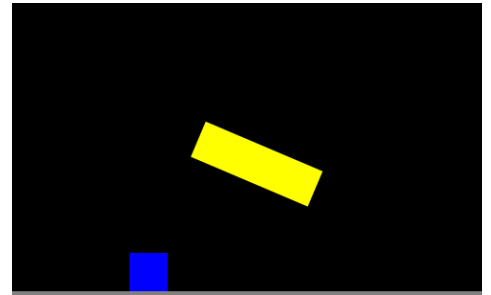

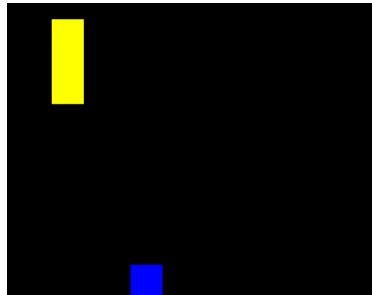

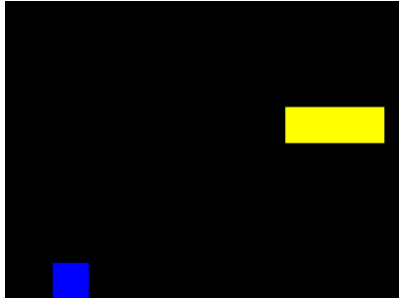

Movement mechanics: reverse mechanics of avatar, pressing space provides downwards thrust acceleration, gravity pulls it towards the top of the screen

Obstacles:

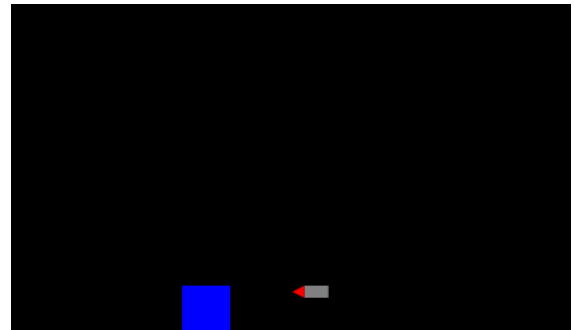

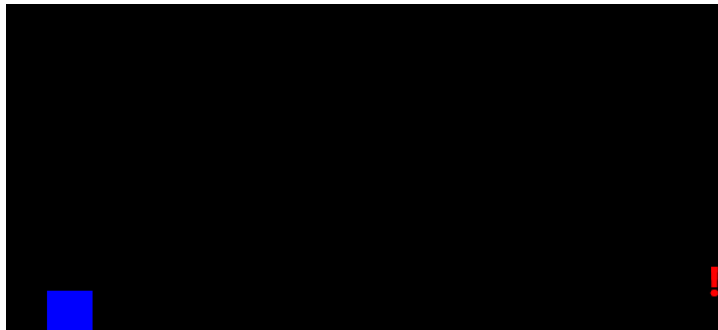

Zapper:

a yellow rectangle of differing lengths that can spawn horizontally, vertically, or rotating.

Rocket:

a warning sign tracks the y position of the vehicle for 3 seconds, and a small projectile is fired at the last recorded y-position

Laser:

two blocks appear on the screen for a 3 second warning period, after which a red laser appears in between the blocks for 2 seconds
